

Thomas Murray is committed to helping FMIs improve their security with cutting-edge threat intelligence. Launched in 2021, Orbit Security is an AI-driven solution that monitors the security posture of every FMI in the world, every day.

Orbit Security, Tailored for FMIs

A company's public-facing IT infrastructure – its attack surface – is often the first target for threat actors, but it is also the hardest area for IT Security teams to monitor. Orbit Security provides continuous, accurate and actionable threat intelligence for FMIs of any size to monitor their enterprise and third-party cyber risk.

With Orbit Security you can:

- Discover every IP address exposed by your company
- Monitor for breaches and vulnerabilities that could be exploited
- Track performance with a 0 to 1,000 security rating
- Benchmark against peers regionally and across the industry
- Receive new risk alerts, trend analysis and executive reporting

Enterprise Risk

Improve your company's cyber security posture with weekly 0 to 1,000 cyber risk ratings, peer benchmarking, threat intelligence reports, alerts and remediation guidance.

Third-Party Risk

Monitor your critical service providers, CSD direct participants, exchange members and wider capital market ecosystem with objective ratings and cutting-edge threat intelligence.

Start with a 14-day trial and receive:

- Your organisation's weekly 0 to 1,000 security rating
- Benchmarking against every FMI in the world
- A comprehensive threat intelligence report
- Analysis of participants, members and key service providers
- Executive reporting, remediation advice and much more
